

**DATE:**        October 3, 2011

**Material Safety Data**

Spiracur SNaP products have passed all biocompatibility testing as required by ISO10993:2003. Product biocompatibility test data has been submitted and accepted by US and foreign regulatory bodies.

The materials used in the construction of the SNaP device are commonly used in medical device construction (polycarbonate, polyurethane, etc). The product materials themselves are partly proprietary and MSDS's are not available for some materials. MSDS's may be available for certain components (such as tubing) upon request. However, Spiracur asserts that all material is safe for its intended use.

Lawrence Hu
