*Results as reported by an independent laboratory using USDA accepted test method ASTM-D6866-08

Committed to the environment and your well-being.

Stoko® Skin Care earth-friendly products meet the following specifications:

- Meet or Exceed the EPA and California Volatile Organic Compound (VOC) Guidelines
- Recyclable Packaging
- Solvent Free
- Residual Amounts of Products are Low
- Astopon® Walnut Shell Scrubber is all Natural and Renewable
- Skin Compatibility is Tested and Determined to be Good to Very Good
- American Chemistry Council Technical Specification Responsible Care® 14001:2005 Certified
- ISO 14001:2004 Certified
- ISO 9001:2000 Certified
- Green Seal Certified™ on select products

USDA BioPreferredSM FAQ'S

BioPreferredSM

What is the purpose of the BioPreferredSM program?

Managed by the U.S. Department of Agriculture, the BioPreferredSM procurement preference program was created to increase the purchase and use of biobased products by agencies of the federal government.

What makes a product "biobased?"

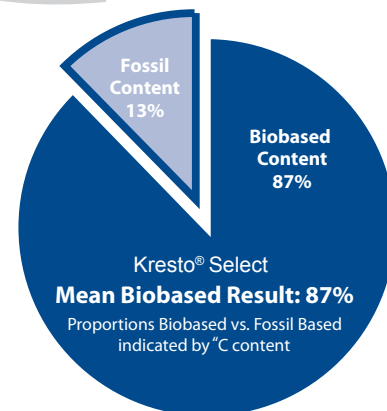

Section 9002 of the Farm Security and Rural Investment Act of 2002 defines a biobased product as a commercial or industrial product, other than food or feed, that contains, in whole or in significant part, renewable agricultural or forestry materials. This renewable content includes plant, animal and marine materials.

What is "biobased content?"

Biobased content is derived from renewable, biological sources, as opposed to non-renewable, fossil sources. The amount of biobased content in a given product is determined via ASTM Test Method D6866. This test compares the quantity of a decaying carbon isotope that remains in a sample to how much the same sample would contain if it were composed completely of recently grown materials. Results are expressed as percentages of biobased and fossil content. For example, refer to the pie chart depicting results for Kresto® Select.

Why should I purchase BioPreferredSM products?

- BioPreferredSM products contribute to environmental sustainability and energy independence by reducing our consumption of non-renewable resources, especially petroleum based materials.
- By using more renewable resources, we conserve the world's petroleum supply.
- As biobased materials are often agricultural products, their use contributes to the growth of our agricultural markets.
- Wise use of natural resources helps to strengthen the world economy by creating new markets and extending our supply of fossil fuels.
