Medfix • Bordered Gauze • TenderWet Active • Optifoam Ag • Maxorb Extra Ag

Puracol • Puracol Plus Ag⁺ • Optifoam • Derma-Gel • MatriStem • Gentac
Today’s Wound Care Treatments from Medline®

Assessing and treating wounds is a daily challenge. This is why Medline is committed to creating products and educational resources that empower clinicians to improve outcomes and reduce costs.

The DIMES® system of wound bed preparation and treatment provides a simple guide to assist you in selecting the right product, at the right time, for your patient’s wounds.

What do DIMES have to do with chronic wound care?

DIMES serves as a framework for planning and implementing an effective treatment plan for wounds using valuable resources wisely.

We all realize that preparation is the key to care. This is also true in preparing wounds for healing. The Wound Bed Preparation (WBP) Paradigm is a practical guide for the treatment of chronic wounds (see Figure 1).1,2,3,4

Figure 1

Wound Bed Preparation Paradigm

Person with Chronic Wounds

Treat Cause:
(e.g. vascular supply, edema, pressure, shear)

Local Wound Care

Debridement of Devitalized Tissue
pressure redistribution

Infection (superficial/deep)
Inflammation

Moisture Balance

Edge – Non-healing Wound
Biological agents, Growth factors, Skin substitutes, Adjunctive therapies

Support with Products, Services and Education
To provide today's wound care treatments

©Sibbald, Woo and Ayello
**DIMES:** an organized and consistent approach to **Wound Care**

As always, the patient comes first. Address patient-centered concerns and treat the cause of the wound before optimizing local wound care.¹

**The components of local care are¹:**

<table>
<thead>
<tr>
<th><strong>D</strong></th>
<th><strong>I</strong></th>
<th><strong>M</strong></th>
<th><strong>E</strong></th>
<th><strong>S</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Debridement</td>
<td>Infection/Inflammation</td>
<td>Moisture Balance</td>
<td>Edge/Environment</td>
<td>Supportive Products, Services and Education</td>
</tr>
<tr>
<td>The removal of nonviable tissue</td>
<td>Addressing bioburden and inflammation within the wound</td>
<td>Achieving and maintaining moisture balance in and around the wound</td>
<td>Treating stalled wounds where epithelium fails to migrate</td>
<td>Appropriate support promotes optimal outcomes</td>
</tr>
</tbody>
</table>

---

**Evidence Based References**

It is important to understand that DIMES is not just an acronym but a roadmap for practice.1

**Debridement**
The first step in wound healing is the removal of necrotic tissue that can impede the growth and proliferation of healthy granulating tissue.1

**Infection/Inflammation**
All wounds contain a level of bacteria. Since all wounds are different it is important that a clinician evaluate the wound and determine the proper antimicrobial treatment.1

**Moisture Balance**
Achieving the right moisture balance can be a challenge. Too much moisture can lead to periwound maceration and skin breakdown, while too little moisture can impede cellular activities and promote eschar formation, resulting in poor wound healing.1

**Edge/Environment**
If the wound edge is not migrating after appropriate wound bed preparation (debridement, infection/inflammation, moisture balance) and healing is stalled, then advanced therapies should be considered.1

**Supportive Products, Services and Education**
There are other products that complement DIMES but do not fit into one of the above categories. Therefore, always consider the “other” supportive products to complete the treatment.

Additionally, supportive services and education are paramount to achieving the best possible outcome.1
Table of Contents

Connecting the **right product** to the **right application** is critical. *Today’s Wound Care Treatments* from Medline is organized using the first letter of each component of care, D-I-M-E-S. To make it even easier we’ve provided a chart to guide you through each component of the DIMES system and solutions that Medline provides. Note each section is color coded by letter.

Evidence Based References

About TenderWet Active

• Debrides necrotic wounds

• Absorbs and retains microorganisms

• Uses physiologically-compatible Ringer’s solution

• More effective than wet gauze therapy

• Will not stick to wound bed, which helps ease the pain of dressing changes

• Cost-effective

• Helps create an ideal moist healing environment

• High fluid retention

• Easy application and removal

TenderWet Debridement Rate

Indications

Pressure ulcers
Partial and full-thickness wounds
Leg ulcers
Diabetic ulcers
Surgical wounds
Lacerations and abrasions
Skin tears
Dry, light and moderately draining wounds
First- and second-degree burns

Contraindications

None

Change Frequency

TenderWet may be left in place for up to 24 hours
Dressing change frequency will depend on the amount of drainage

Recommended Secondary Dressings

Medfix Tape
Bordered Gauze
Stratasorb Composite

Evidence-Based References

Ordering Information
Debrides necrotic wounds while providing an ideal, moist wound-healing environment.

Arglaes®
Antimicrobial Silver Wound Dressing

POWDER AND FILM WITH SILVER

About Arglaes
- Manages bacterial burden
- Continuous antimicrobial protection
- Extended wear time
- Non-staining
- Can convert any other dressing to an antimicrobial (Arglaes Powder)

Indications
- Pressure ulcers
- Diabetic foot ulcers
- Partial and full-thickness wounds
- Leg ulcers
- Central lines, CVPs and PICC lines (Arglaes Film only)
- Surgical wounds (Arglaes Film only)
- Negative pressure wound therapy (Arglaes Powder only)
- Grafted wounds (Arglaes Powder only)
- Donor sites
- Lacerations and abrasions
- First- and second-degree burns

Contraindications
- Third-degree burns
- Patients with a known sensitivity to silver
- As a surgical implant
- Do not use topical antibiotics in conjunction with Arglaes

Change Frequency
Arglaes Film may be left in place for up to 7 days
Arglaes Island and Arglaes Powder may be left in place for up to 5 days
Dressing change frequency will depend upon the amount of drainage

Recommended Secondary Dressings (Powder)
- Stratasorb Composite
- Bordered Gauze
- Suresite 123+Pad

Sustained-Release
- Greater than 90% reduction in viable bacterial numbers after 48 hours.

Powerful antimicrobial activity-up to a 6 log reduction (in vitro studies)

Maxorb® Extra Ag
Antimicrobial Silver Wound Dressing

About Maxorb Extra Ag
• Helps manage bacterial burden\(^1,2\)
• Continuous antimicrobial protection\(^1,3\)
• Cost-effective\(^4\)
• Easy dressing changes
• Highly absorbent\(^5\)
• Superior gelling and fluid handling\(^5\)
• Reduces odor\(^6\)
• Fluid will not wick laterally
• Up to 21-day protection

Indications
Pressure ulcers\(^6,7\)
Leg ulcers
First- and second-degree burns\(^8\)
Moderate to heavily draining partial and full-thickness wounds
Diabetic foot ulcers
Surgical wounds
Graft and donor sites
Trauma wounds

Contraindications
Third-degree burns
Dry or lightly draining wounds
Patients with a known sensitivity to alginates or silver
To control heavy bleeding
As a surgical implant

Change Frequency
Maxorb Extra Ag may be left in place for up to 21 days\(^9\)
Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
Stratasorb Composite
Bordered Gauze
Suresite 123+Pad
Maxorb Extra Ag
For moderate to heavily draining, partial and full-thickness wounds

About Optifoam Ag
• Ionic silver provides antimicrobial barrier
• Continuous antimicrobial protection
• Highly absorbent
• Conformable
• Can manage repeated bacteria introduction
• Non-staining

Indications
Pressure ulcers
Partial and full-thickness wounds
Surgical wounds
Wounds with colonization
Leg ulcers
Diabetic foot ulcers
Donor sites
Lacerations and abrasions
Skin tears
First- and second-degree burns
Under compression bandages

Contraindications
Third-degree burns
Lesions with active vasculitis

Change Frequency
Optifoam Ag may be left in place for up to 7 days
Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
Medfix Tape
Gentac Tape
Elastic Net
Medigrip Tubular Bandage

Fluid Handling Comparative Study

Powerful ability to manage wound fluids.
Ordering Information
Ionic silver foam dressing for targeted antimicrobial protection and fluid management.

To order by the box, add a “Z” to the end of the item number.

---

**Comparative Antimicrobial Effect Study**

4 hrs. at 37° C exposure to 4 sq cm of each dressing

10⁶ - 10⁷ Colony Forming Units (CFUs) initial population

Optifoam Ag has the least number of surviving colony forming units at 4 hours.

For more information, visit [www.medline.com/woundcare](http://www.medline.com/woundcare) or contact your sales specialist.
SilvaSorb®
Antimicrobial Silver Wound Dressing

About SilvaSorb
- Helps manage bacterial burden\textsuperscript{1,2}
- Continuous antimicrobial protection\textsuperscript{1,3}
- Gentle for the patient\textsuperscript{4,5}
- Advanced fluid management\textsuperscript{1}
- Extended wear time\textsuperscript{3,6,7}
- Non-staining\textsuperscript{1}

Indications
- Pressure ulcers
- Partial and full-thickness wounds
- Leg ulcers
- Diabetic foot ulcers
- Graft wounds and donor sites
- Skin tears
- Surgical wounds
- Lacerations and abrasions
- First- and second-degree burns

Contraindications
- Patients with a known sensitivity to silver

Change Frequency
- Sheets may be left in place for up to 7 days
- Amorphous gel may be left in place for up to 3 days
- Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
- Stratasorb Composite
- Bordered Gauze
- Suresite 123+Pad

Derma-Gel®
Hydrogel Sheet Wound Dressing

About Derma-Gel
- Manages bacterial burden
- Highly absorbent
- Cushions and protects wound
- Helps create moist wound environment
- Easy to apply and remove

Indications
- Pressure ulcers
- Partial and full-thickness wounds
- Leg ulcers
- Surgical wounds
- Lacerations and abrasions
- First- and second-degree burns

Contraindications
- Patients with known hypersensitivity to glycerin

Change Frequency
- Derma-Gel may be left in place for up to 5 days
- Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
- Medix Tape
- Suresite® Film (for waterproofing)
- Elastic Net
- Medigrip Tubular Bandage

Absorption Comparison
Derma-Gel has a very high absorption capacity.

Evidence Based References
2. Independent study performed by NAMSA, Northwood, Ohio.
# Ordering Information

Soft and flexible, Derma-Gel promotes a moist environment and can absorb up to five times its weight.

To order by the box, add a "Z" to the end of the item number.

Exuderm OdorShield™
Hydrocolloid Wound Dressing

Recommended Wound Conditions
- Shallow
- No/Minimal drainage
- Primary dressing
- Deep
- Light/Moderate drainage
- Secondary dressing

About Exuderm OdorShield
- Absorbs odor with cyclodextrin technology
- Not inactivated by wound protein
- Manages drainage
- Longer wear time
- Low residue formula
- Protective, occlusive barrier
- Satin finish backing

Indications
- Pressure ulcers
- Partial and full-thickness wounds
- Leg ulcers
- Donor sites
- Wounds with light to moderate drainage
- Lacerations and abrasions
- First- and second-degree burns

Contraindications
- Third-degree burns

Change Frequency
Exuderm OdorShield can be left in place for up to 7 days
Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
N/A

Evidence Based References
Ordering Information
Odor absorbing technology combined with excellent fluid management.

Maxorb® Extra
CMC/Alginate Wound Dressing

Recommended Wound Conditions
- Shallow  ○ No/Minimal drainage  ○ Primary dressing
- Deep  ○ Moderate/Heavy drainage  ○ Secondary dressing

About Maxorb Extra
- Highly absorbent
- Superior fluid handling
- Fluid will not wick laterally
- Easy dressing changes

Indications
- Pressure ulcers
- Partial and full-thickness wounds
- Leg ulcers
- Diabetic ulcers
- Surgical wounds
- Donor sites
- Lacerations and abrasions
- First- and second-degree burns

Contraindications
- Third-degree burns
- For use as a surgical sponge
- Dry wounds
- Patients with a known sensitivity to alginates

Change Frequency
Maxorb Extra may be left in place for up to 5 days
Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
- Stratasorb Composite
- Bordered Gauze
- Suresite 123+Pad

About Maxorb Extra
- Highly absorbent
- Superior fluid handling
- Fluid will not wick laterally
- Easy dressing changes

Evidence Based References
Ordering Information
Fast-acting absorption without lateral wicking.

To order by the box, add a “Z” to the end of the item number.

Optifoam®
Foam Wound Dressing

About Optifoam
- Moisture vapor transmission rate (MVTR) adjusts to fluid level
- Will not curl at edges
- Highly absorbent
- Helps create ideal healing environment
- Waterproof outer layer protects wound and keeps bacteria out

Indications
- Pressure ulcers
- Partial and full-thickness wounds
- Leg ulcers
- Donor sites
- Lacerations and abrasions
- Skin tears
- First- and second-degree burns

Contraindications
- Third-degree burns
- Lesions with active vasculitis

Change Frequency
Optifoam may be left in place for up to 7 days
Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
- Medfix Tape (for Optifoam Non-Adhesive)
- Elastic Net (for Optifoam Non-Adhesive)
Optifoam Thin and Optifoam can be used as a secondary dressing

Fluid Handling Comparative Study

Skintegrity®
Hydrogel Wound Dressing

**Recommended Wound Conditions**

- Shallow
- No/Minimal drainage
- Primary dressing
- Deep
- Moderate/Heavy drainage
- Secondary dressing

**Indications**

- Pressure ulcers
- Partial and full-thickness wounds
- Leg ulcers
- Surgical wounds
- Lacerations, abrasions and skin tears
- First- and second-degree burns

**Contraindications**

- Patients with a known sensitivity to components of the gel
- Heavily draining wounds

**Change Frequency**

Skintegrity may be left in place for up to 3 days
Dressing change frequency will depend on amount of drainage

**Recommended Secondary Dressings**

- Stratasorb Composite
- Bordered Gauze
- Suresite 123+ Pad

---

**About Skintegrity**

- Helps create a moist wound environment
- Balanced formulation
- Easy irrigation

**Cytotoxicity Test For Skintegrity Hydrogel**

*Using Murine L929 Embryo Fibroblasts Agar Overlay Neutral Red Assay*

Suresite®
Transparent Film Wound Dressing

Recommended Wound Conditions
- Shallow
- No/Minimal drainage
- Deep
- Moderate/Heavy drainage
- Primary dressing
- Secondary dressing

Indications
- Partial-thickness wounds
- Full-thickness wounds (secondary dressing)
- Peripheral and central I.V. lines
- Skin tears
- Lacerations and abrasions
- To help prevent skin breakdown caused by friction to epidermis

Contraindications
- Contraindicated as a primary dressing on wounds with moderate to heavy drainage

Change Frequency
- Suresite may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
- N/A

About Suresite
- Traditional moisture vapor transmission rate (MVTR)
- Conformable
- Won't stick to itself
- Microporous technology
- Permits continuous observation
- Variety of delivery systems

Puracol® Plus / Puracol Plus Ag+
Collagen Microscaffold™ Wound Dressing

Recommended Wound Conditions
- Shallow / No/minimal drainage
- Deep / Moderate/Heavy drainage
- Primary dressing
- Secondary dressing

Indications
- Pressure, Venous, Diabetic Ulcers
- Partial and full-thickness wounds
- Ulcers caused by mixed vascular etiologies
- Burns
- Donor sites and other surface wounds
- Abrasions
- Traumatic wounds healing by secondary intention
- Dehisced surgical wounds

Contraindications
- Active vasculitis or patients with known sensitivity to collagen and/or silver

Change Frequency
- Puracol Plus and Puracol Plus Ag+ may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
- Stratasorb Composite
- Bordered Gauze
- Optifoam® Adhesive
- Suresite 123+Pad
Ordering Information

Advanced, native collagen with a unique three dimensional structure that helps promote cell growth.

To order by the box, add a “Z” to the end of the item number.

MatriStem®
Extracellular Matrix (ECM) Wound Sheet & MicroMatrix™ Particles

About MatriStem Devices
- An ECM derived from porcine tissue
- Maintains and supports a healing environment for wound management
- Jump-starts stalled wounds
- Biodegradable
- Basement membrane unique to MatriStem contains a number of proteins
- Supports the natural healing process

Clinical Study
![Clinical Study Graph]

- MatriStem is supported by a clinical study on patients with chronic wounds
- Average area of closure per day:
  - MatriStem - 0.08 cm²
  - Control - 0.04 cm²

Indications
- Partial and full thickness wounds
- Pressure ulcers
- Venous ulcers
- Diabetic ulcers
- Donor sites and graft sites
- Dehisced surgical wounds
- Abrasions
- Burns

Contraindications
- Patients with a known sensitivity or allergy to porcine materials
- Third degree burns

Change Frequency
MatriStem may be reapplied every 2-7 days

Recommended Secondary Dressings
For wet wounds: a non-adherent dressing followed by an absorptive dressing
Non-adherent dressings: Medline’s oil emulsion dressing, Non-Adherent Pad, Xeroform or any other non-adherent dressing
Absorptive dressings: Maxorb Extra calcium alginate, Optifoam foam or any other absorptive dressing
For dry wounds: a non-adherent dressing (as listed above) followed by a hydrogel dressing such as Skintegrity Hydrogel to keep the wound moist.
### Ordering Information

A natural extracellular matrix that maintains and supports a healing environment for wound management.

To order one dressing, add "H" to the end of the item number.

| MatriStem Wound Sheet can help the body restart the natural healing process |
|---------------------------------|-----------------|------------------|
| **Item Number** | **Description** | **Packaging** |

**FourFlex and ThreeFlex**  
*Multi-Layer Bandage System*

**About FourFlex and ThreeFlex**
- Effective appropriate compression
- Extended wear time
- Absorbs drainage
- Efficient packaging

**Indications**
Treatment of chronic venous insufficiency

**Contraindications**
Patients with an Ankle Brachial Pressure Index (ABI) of less than 0.8. An ABI of less than 0.8 may mean that the patient has arterial insufficiency or the leg ulcer is of mixed etiology.

**Change Frequency**
Multi-layer compression bandages may be left in place for up to 7 days. Dressing change frequency will depend on amount of drainage.

**Recommended Secondary Dressings**
Usually no secondary dressing is required

---

**ABI Chart**
To determine the Ankle Brachial Index (ABI), divide the ankle systolic pressure by the brachial systolic pressure.

\[
\frac{\text{Ankle Pressure}}{\text{Brachial Pressure}} = \text{ABI}
\]

**Interpretation of the Ankle Brachial Index**

<table>

Compression Testing of Bandages

Based on principles contained in BS 6612

<table>
<thead>
<tr>
<th>Test Material</th>
<th>Test</th>
<th>Limb Circumference (cm)</th>
<th>Pressure (mm/Hg)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Medigrip</td>
<td>1</td>
<td>17.2</td>
<td>7.2</td>
</tr>
<tr>
<td>Tubigrip</td>
<td>1</td>
<td>17.2</td>
<td>5.8</td>
</tr>
<tr>
<td>Medigrip</td>
<td>2</td>
<td>18.7</td>
<td>7.0</td>
</tr>
<tr>
<td>Tubigrip</td>
<td>2</td>
<td>18.7</td>
<td>6.1</td>
</tr>
</tbody>
</table>

Summary:
Although the statistical analysis indicated that the pressures produced by the two products are different, this difference is unlikely to prove significant in the clinical situation.

Independent study performed by SMTL, Bridgend, Wales

1 British Standards Institution, "Graduated Compression Hosiery", BS6612, (1985, 1993)
Ordering Information

Provides even support and pressure to reduce edema and assist in venous return.

</table>

*For a full arm coverage, measure the largest part of the forearm. For a full leg or below the knee coverage, measure the widest point of the calf. And, for the hand, measure around metacarpophalangeal joint.

**Low = 5-10 mm Hg Mercury (for General edema)  Medium = 10-20 mm Hg (for Varicose conditions/post burn scarring)  High = 20-30 mm Hg (for Soft tissue injuries/joint effusions)
Unna-Z
Unna-Boot Bandage

About Unna-Z
• Maintains a moist healing environment
• Impregnated with zinc oxide*
• Provides light compression
• Inner core for easy application

Indications
Venous leg ulcers

Contraindications
Patients with a known sensitivity to components (zinc and/or calamine)

Change Frequency
Unna-Z can be left in place for up to 7 days, depending on drainage

Recommended Secondary Dressings
Compression Coflex LF2 - MDS089004
Bulkee® Gauze Wrap – NON25865

*Items NONUNNA3 and NONUNNA4 contain calamine and zinc oxide.
Ordering Information
Maintains a moist healing environment and provides light compression for venous leg ulcers.

To order one bandage, add an "H" to the end of the item number.

Gentac®
Silicone Fixation Tape

DRESSING RETENTION TAPE

About Gentac
- Silicone adhesive
- Gentle for patient
- Cut to size needed
- Easy to apply
- Waterproof

Indications
To secure primary or secondary dressings
To secure gastrostomy tubes and other feeding tubes

Contraindications
Contraindicated as a primary dressing

Change Frequency
Gentac may be left in place for up to 7 days
Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
N/A

Ordering Information
Gentle fixation tape.

To order one roll, add “H” to the end of the item number.

# Medfix

## Low Sensitivity Adhesive

**DRESSING RETENTION TAPE**

### About Medfix

- Low sensitivity adhesive, gentle for the patient
- Medfix has a printed s-curve release liner
- Medfix EZ is linerless and perforated
- Water resistant

### Indications

- To secure primary dressings
- To secure gastrostomy tubes and other feeding tubes

### Contraindications

- Contraindicated as a primary dressing

### Change Frequency

- Medfix may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

### Recommended Secondary Dressings

- N/A

### Ordering Information

Flexible, skin-friendly tape.

### Medfix

Printed-release liner allows flexibility and customized sizing

Skintegrity®

Wound Cleanser

About Skintegrity Wound Cleanser

- Easy cleansing
- Adjustable trigger, PSI of 8.6 at 3”
- Within AHCPR guidelines

Indications

To clean a wide variety of wounds including:
- Pressure ulcers
- Partial and full-thickness wounds
- Infected and non-infected wounds

Contraindications

Patients with a known sensitivity to ingredients in Skintegrity Wound Cleanser

Change Frequency

With every dressing change

Recommended Secondary Dressings

Marathon®
Liquid Skin Protectant

About Marathon Liquid Skin Protectant
- Robust, flexible and long-lasting
- No stinging: contains no solvents or activators
- Protects from the effects of friction
- Protects from moisture (urine, exudate, sweat, and other bodily fluids) that can cause maceration
- Can be used on intact or damaged skin
- Fast drying
- Breathable
- Marathon shows greater protective capabilities than 3M Cavilon® against corrosive fluids (synthetic urine) and wash-off.*

Indications
- Damaged Skin
- Fragile skin
- Periwound skin
- Peristomal skin

Contraindications
- Second or third degree burns
- Infected areas
- Directly to the wound bed, or to deep puncture wounds

Change Frequency
- Up to 3 days, reapply as needed

Recommended Secondary Dressings
- N/A

Ordering Information
Helps create a barrier on normal to damaged skin that protects from friction and moisture.

Sureprep® and Sureprep® No-Sting

About Sureprep and Sureprep No-Sting

- Protects from adhesive stripping¹,²
- Safe for delicate skin³
- Outperformed 3M Cavilon in controlled trials.⁴
- Fast drying⁵
- Vapor permeable
- Creates a waterproof barrier on periwound skin
- Protection from friction and body fluids
- Transparent

Indications

- Periwound skin
- Peristomal skin
- Damaged skin (Sureprep No-Sting)
- Incontinence Protection and Barrier

Contraindications

- Direct application to wound bed
- Denuded or macerated skin (Sureprep)

Change Frequency

With every dressing change

Transepidermal Water-Loss (TEWL)⁴

On day 4 and day 5 subjects using Sureprep No-Stings experienced significantly less water loss than subjects using 3M Cavilon No-Sting; indicating that Sureprep No-Sting provides greater protection from adhesive stripping.

Evidence Based References

Classification of Tissue Destruction

Wounds not caused by pressure such as skin tears, donor sites, vascular ulcers, surgical wounds and burns are described as partial or full-thickness to indicate the depth of tissue destruction.

- **Partial-Thickness (like Stage II)**
- **Full-Thickness (like Stage III or IV)**

Ulcers caused by pressure are staged. This is a method of classifying pressure ulcers, describing the degree of tissue damage observed. According to the NPUAP, pressure ulcer is a localized injury to the skin and/or underlying tissue usually over a bony prominence, as a result of pressure, or pressure in combination with shear and/or friction. A number of contributing or confounding factors are also associated with pressure ulcers; the significance of these factors is yet to be elucidated.  

**Stage I**

- Intact skin with non-blanchable redness of a localized area usually over a bony prominence. Darkly pigmented skin may not have visible blanching; its color may differ from the surrounding area.
- The area may be painful, firm, soft, warmer or cooler as compared to adjacent tissue. Stage I may be difficult to detect in individuals with dark skin tones. May indicate “at risk” persons (a heralding sign of risk).

**Stage II**

- Partial-thickness loss of dermis presenting as a shallow open ulcer with a red pink wound bed, without slough. May also present as an intact or open/ruptured serum-filled blister.
- Presents as a shiny or dry shallow ulcer without slough or bruising. This stage should not be used to describe skin tears, tape burns, perineal dermatitis, maceration or excoriation. "Bruising indicates suspected deep tissue injury.

**Stage III**

- Full-thickness tissue loss. Subcutaneous fat may be visible but bone, tendon or muscle are not exposed. Slough may be present but does not obscure the depth of tissue loss. May include undermining and tunneling.
- The depth of a stage III pressure ulcer varies by anatomical location. The bridge of the nose, ear, occiput and malleolus do not have subcutaneous tissue and these ulcers can be shallow. In contrast, areas of significant adiposity can develop extremely deep stage III pressure ulcers. Bone/tendon is not visible or directly palpable.

**Stage IV**

- Full-thickness tissue loss with exposed bone, tendon or muscle. Slough or eschar may be present on some parts of the wound bed. Often include undermining and tunneling.
- The depth of a stage IV pressure ulcer varies by anatomical location. The bridge of the nose, ear, occiput and malleolus do not have subcutaneous tissue and these ulcers can be shallow. Stage IV ulcers can extend into muscle and/or supporting structures (e.g., fascia, tendon or joint capsule) making osteomyelitis possible. Exposed bone/tendon is visible or directly palpable.

**Suspected Deep Tissue Injury (DTI)**

- Purple or maroon localized area of discolored intact skin or blood-filled blister due to damage of underlying soft tissue from pressure and/or shear. The area may be preceded by tissue that is painful, firm, mushy, boggy, warmer or cooler as compared to adjacent tissue.
- Deep tissue injury may be difficult to detect in individuals with dark skin tones. Evolution may include a thin blister over a dark wound bed. The wound may further evolve and become covered by thin eschar. Evolution may be rapid exposing additional layers of tissue even with optimal treatment.

**Unstageable**

- Full-thickness tissue loss in which the base of the ulcer is covered by slough (yellow, tan, gray, green or brown) and/or eschar (tan, brown or black) in the wound bed.
- Until enough slough and/or eschar is removed to expose the base of the wound, the true depth, and therefore stage, cannot be determined. Stab (dry, adherent, intact without erythema or fluctuance) eschar on the heels serves as “the body’s natural (biological) cover” and should not be removed.

For more information, visit www.medline.com/woundcare or contact your sales specialist.
Educational Packaging

Many nurses find themselves in situations on a daily basis where valuable time is wasted searching for the right dressing. Often the wrong dressing is used or the dressing is not used properly. By listening to you, we found a way to improve this process and ensure that nurses have the information they need. It is called EP... Educational Packaging. Products available in EP will now have an “EP” at the end of the item number.

The package focuses on patient safety and correct product application. Each package serves as a 2-Minute Course on Wound Care™.

Many times the outer box is thrown away and the product is distributed to the end user by the inner package. For that reason Medline provides an educational show-and-tell booklet of all the pertinent information needed to provide bedside support to the nurse, the patient, and the family.

Education is not just for clinicians so they know and use the latest evidence base in their practice, but it is essential for their patients and their families. Making sure the patients and their family are taught the expected outcomes and the plan to achieve them is vital for successful wound treatment.

Compass Survey Readiness Tag F315

A comprehensive program for incontinence management, including assessment and treatment options, detailed clinical information and educational materials
Education

Educare® Seminars
Medline offers Educare seminars in cities across the United States. These in-depth programs provide wound and skin care education for all levels of clinical staff. Educare programs are approved for continuing education hours and are taught by board-certified wound care nurses. Medline also has a number of other educational programs available to meet the needs of your patients, facility and caregivers.

Educare® Hotline Managed by Wound Care Nurse Specialists
An important number to remember is 1-888-701-SKIN (7546) because it provides access to our Educare Hotline. It is managed by board-certified Wound Care Nurses and supported by a network of advanced wound care product specialists. The nurses are available to answer questions and concerns on product usage such as application and appropriateness of the dressing for the wound condition.

The Educare Hotline is staffed Monday through Friday from 8 a.m. to 5 p.m. Central Standard Time.

Product Support at www.medline.com/woundcare
Medline’s Web site is another way to get up-to-date product information. You will find the latest brochures as well as application videos online at www.medline.com/woundcare. The interactive product selector can also help you choose the best product based upon the wound conditions.

More Than 60 Wound and Skin Care Product Specialists
Receiving help from one of Medline’s 60+ wound care product specialists has never been easier. In addition to our 800 person sales force, the wound care product specialists are devoted to supplying you with appropriate wound care products, services and educational support. This team is highly trained and available to deliver on-site, face-to-face in-servicing for your staff.

For more information, see www.medline.com/woundcare or contact your sales specialist.
Medline University
Medline University offers continuing education programs and accredited continuing nursing education opportunities. We offer a wide array of educational opportunities on topics that are current and relevant to your staff. The courses are presented in an online format so you can take them at your convenience. All you need is a connection to the internet! The course content, test and CE certificate are online. Visit our Web site www.medlineuniversity.com for more information.

Professional healthcare education from Medline, now available on your iPhone® or iPod iTouch®.
Visit the Apple store (store.apple.com) to download the MU iPhone app and start accessing courses, newsfeeds, resources and much more – right from your iPhone!

Summary
In summary, the concept of wound bed preparation includes the treatment of the whole patient before the hole in the patient (treat the cause and the patient-centered concerns). Local wound bed preparation includes DIM (debridement, infection/inflammation and moisture balance) plus advanced edge effect therapies (for wounds with the ability to heal) and support in the way of “other products,” services and nutrition. Finally, always remember that education is the scaffold for practice. Without it, clinicians cannot advance practice and improve patient wound healing outcomes.
